📄 **README.md**

An end to end pySpark project is created, regarding the food items that were sold from restraunts. It's complete analysis has been done with the help from dataset containing records about the platforms through which food item has been ordered like zomato , swiggy etc, which items were ordered & at what address these were delivered. Complete analytics of which item was ordered most number of times by the customers , total amount generated etc. All this pySpark project work is been deployed in Gitlab CI & github as well. This makes it a devops project also.
